RE: Annual Report for NPDES Permits WASM13001, WASM23001, and WASM33001

Dear Mr. Peeler:

With this letter, I am transmitting to you King County's report on the status of our stormwater management program (SWMP) as required under condition S10 of our Municipal Stormwater General Permits (numbers WASM13001, WASM23001, and WASM33001), which were issued on July 5, and which will continue in effect until a new permit is issued. The focus of this report is on compliance activities for calendar year 2004. I have included a narrative piece that addresses the report elements listed in the permits. I have also included a variety of reporting tables and other information to provide more detail on the programs described in our SWMP. As a whole, our program continues very much as it was described and submitted to Ecology for approval in March, 1997.

As a result of your approval, in September of 2004, of the Lake Sammamish management portion of our SWMP, reporting information about Lake Sammamish has been removed from the section "*Progress on Addressing Exceptions to SWMP Approval*" and may now be found in the report under "*Identification of Known Water Quality Improvements or Degradation*" and under "*Status of Watershed-wide Coordination.*"

The only portion of our SWMP still awaiting approval is our Surface Water Design Manual. On Monday, October 25, 2004, the King County Council adopted updates to King County's Critical Areas, Stormwater, and Clearing and Grading Ordinances. The new ordinances went into effect on January 1, 2005. The legislation may be viewed online at <http://metrokc.gov/ddes/cao>. On January 24, 2005, two County-adopted public rules put into effect a new Surface Water Design Manual (SWDM) and Stormwater Pollution Prevention Manual (SPPM) that implement the stormwater control portions of the new ordinances. The new SWDM should completely resolve any outstanding issues of equivalency of the County's SWDM with Ecology's 1992 Stormwater

Manual for the Puget Sound Basin as required under the municipal permit. The new SWDM is also designed to be equivalent to Ecology's 2001 Stormwater Management Manual for Western Washington. The new SPPM expands the County's requirements for source control BMPs to include residential activities. We request that Ecology begin its review of the County's new manuals and ordinances for equivalency with its 2001 Stormwater Management Manual for Western Washington. For your convenience, we are providing a hard copy of the SWDM and SPPM to Ecology coincident with this report. Please contact Curt Crawford, Supervising Engineer of the Stormwater Services Section at 206-296-8329 or curt.crawford@metrokc.gov to make arrangements for the equivalency review and for answers to any questions you may have about our new rules for controlling stormwater.

I certify under penalty of law that this document (the report enclosed) and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of imprisonment for willful violations.

Please do not hesitate to call me at 206-296-6585, or Luanne Coachman, NPDES Municipal Stormwater Permit Coordinator, at 206-296-8381, to discuss this report and the appended materials.

Sincerely,

Daryl Grigsby
Division Director
